

A Predictive Model for Oil Peak Rate

Rice Datathon24 Chevron Track

Oscar Wu , Chih-Jung Fang,
Naman Gupta , Rung-De Chu

PROJECT OBJECTIVE

By exploring the oil peak rate, we aim to develop a model to optimize Chevron's resource management and strategy for asset development.

How can we predict the Oil Peak Rate ?

PROJECT WORKFLOW

Objectives

DATA WRAGLING

Remove irrelevant or
unnecessary data

Use KNN imputer to
process missing values

1.

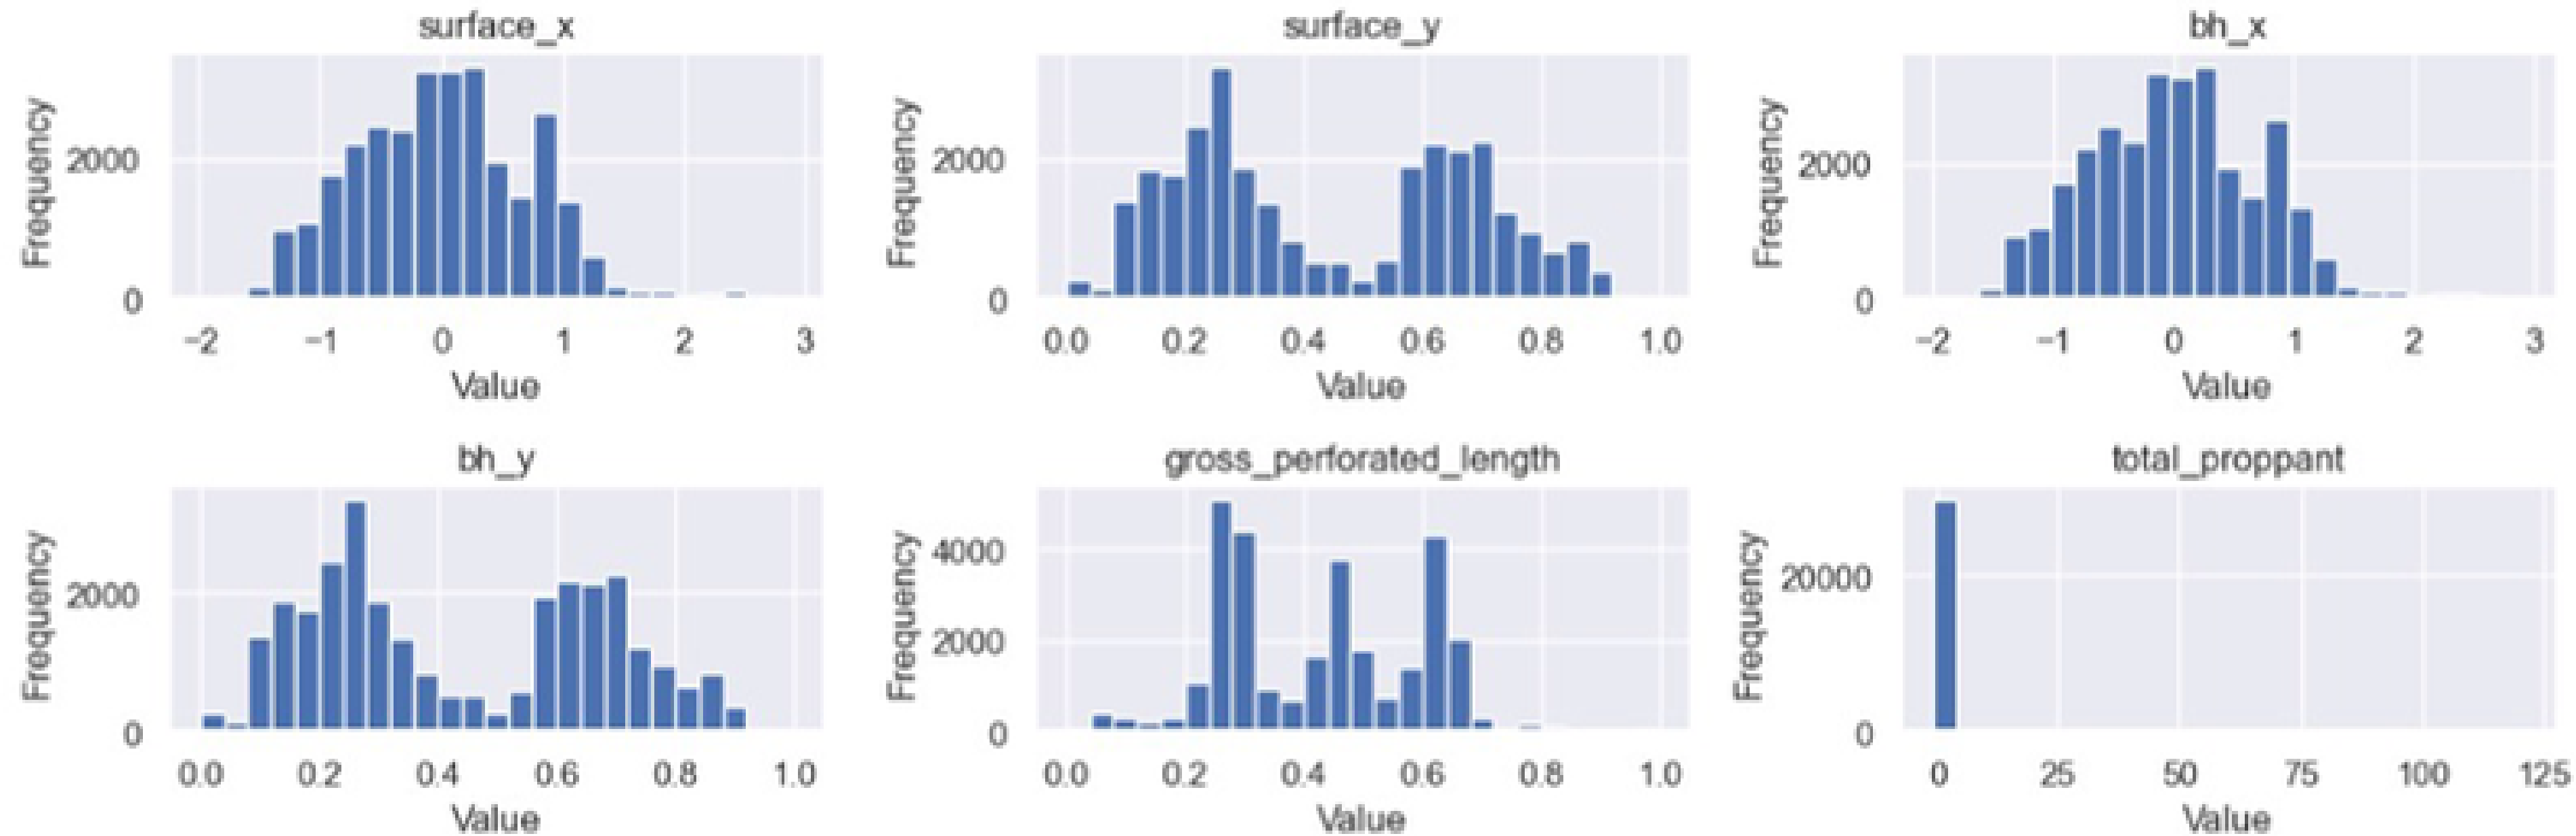

COMPARATIVE ANALYSIS OF OIL PEAK RATE BY OPERATOR

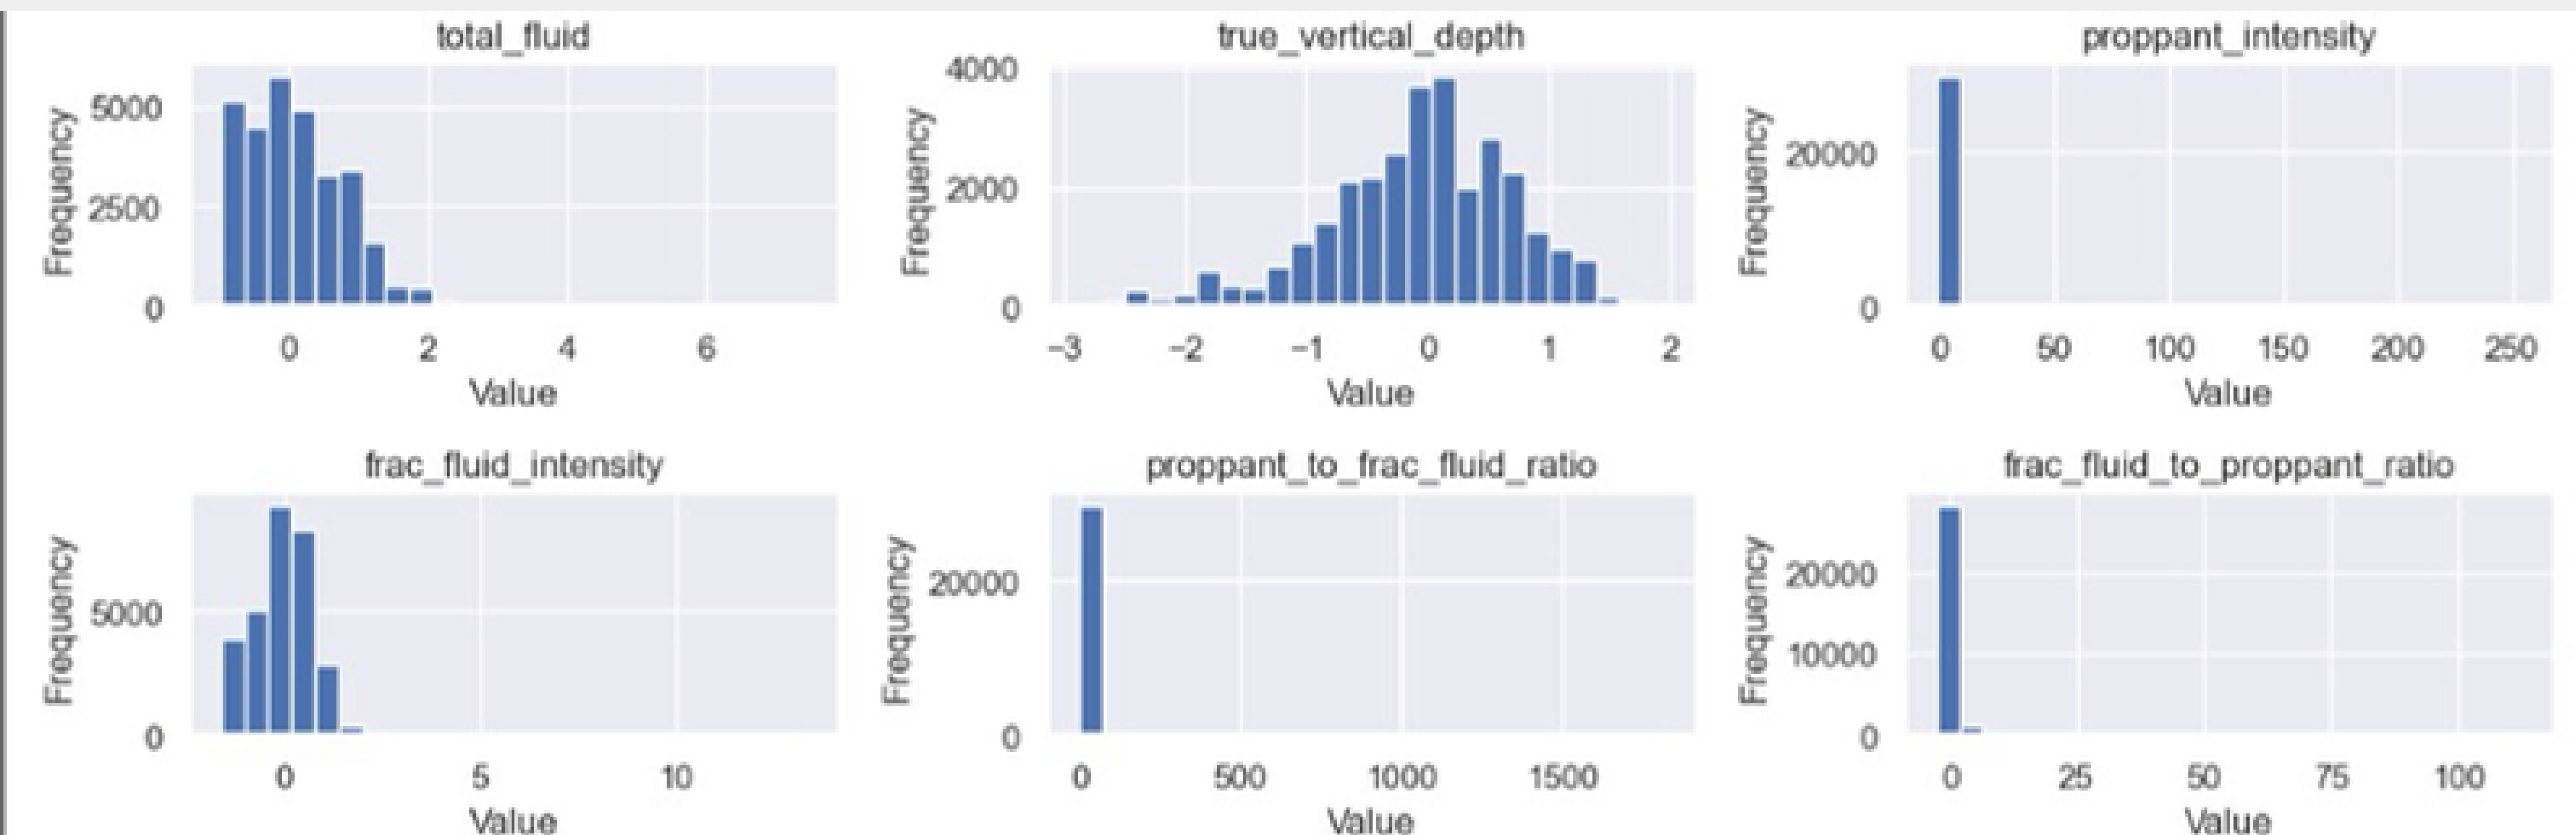

DISTRIBUTION OF OIL PRODUCTION PEAK RATES

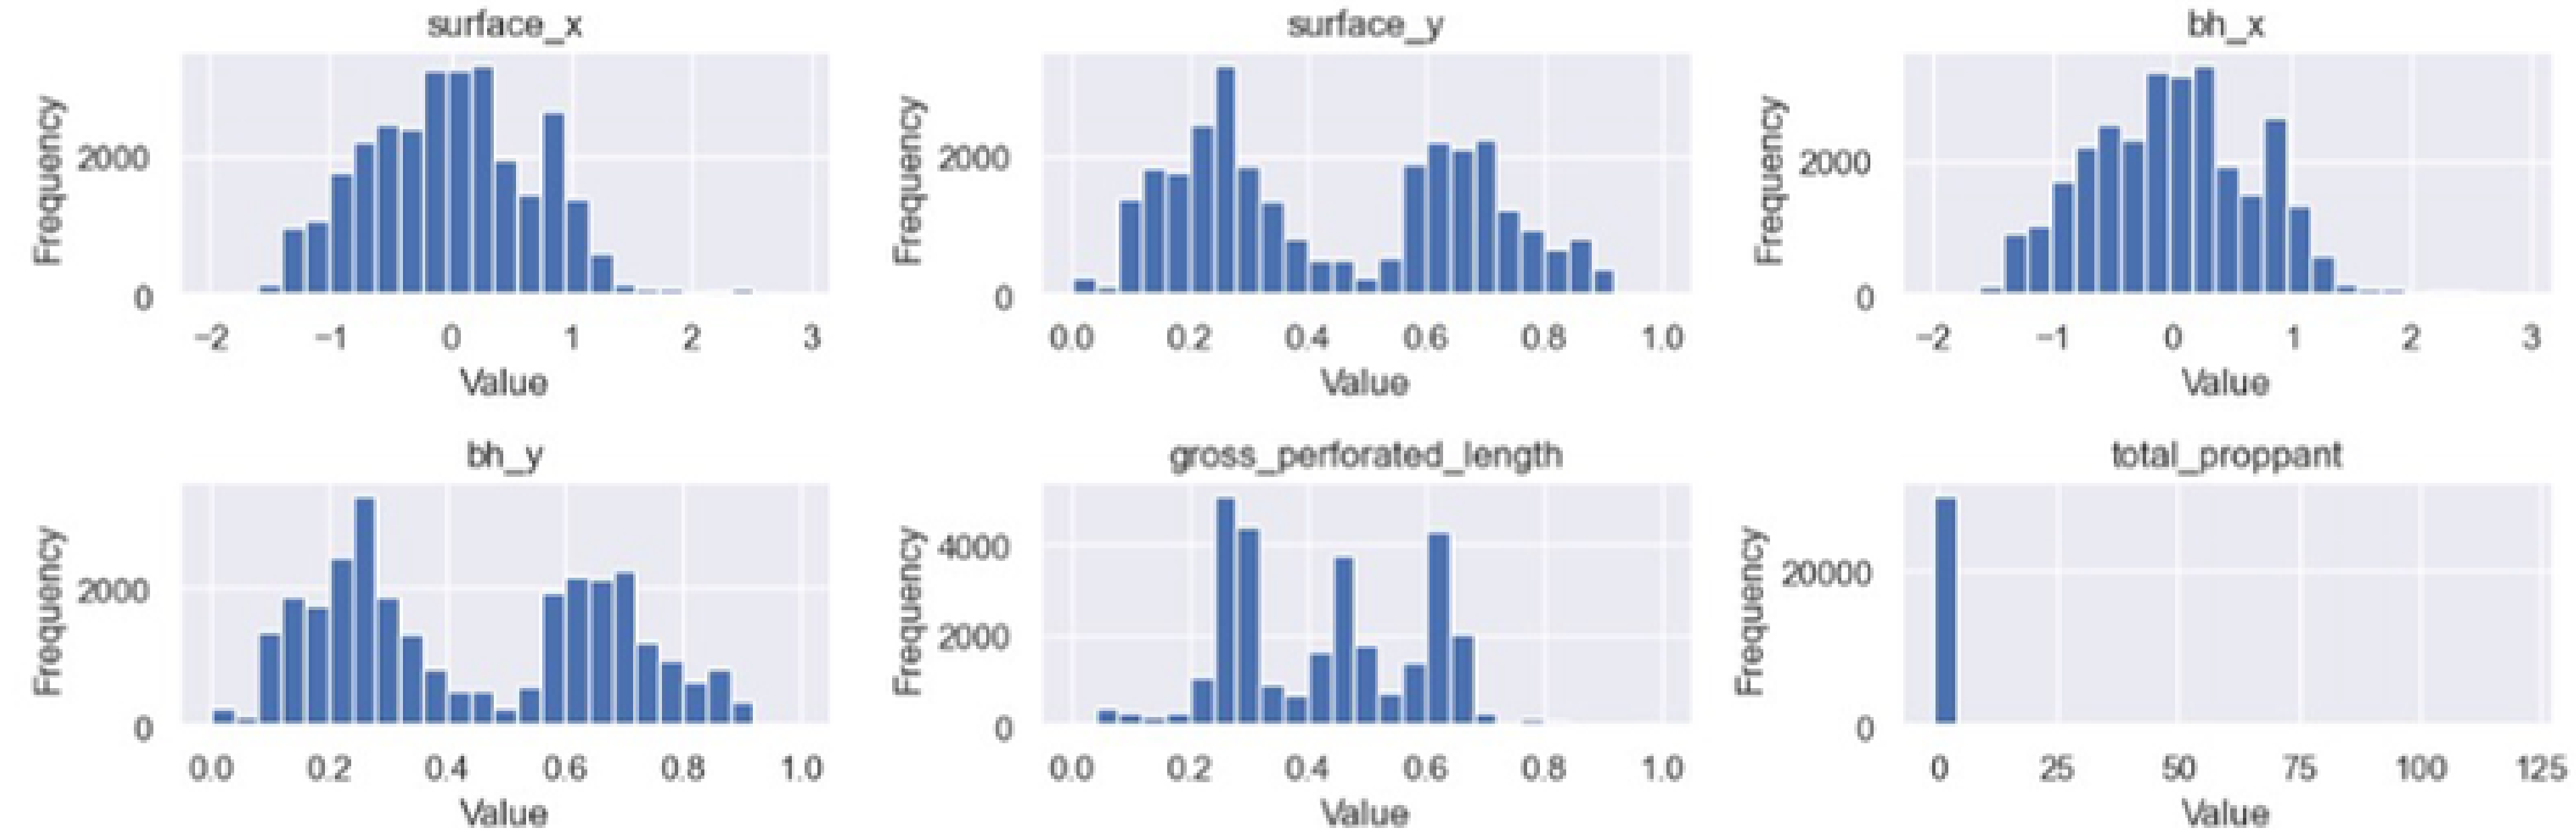

EXPLORATION OF NUMERICAL DATA -1

EXPLORATION OF NUMERICAL DATA -2

EXPLORATION OF NUMERICAL DATA -3

ADDING 4 NEW FEATURES

PROPPANT_EFFICIENCY

$$\text{proppant_efficiency_f} = \frac{\text{total_proppant}}{\text{true_vertical_depth}}$$

WELL_TRAJECTORY_LENGTH

$$\text{well_trajectory_length_f} = \sqrt{(\text{surface_x} - \text{bh_x})^2 + (\text{surface_y} - \text{bh_y})^2 + (\text{true_vertical_depth})^2}$$

FLUID_EFFICIENCY

$$\text{fluid_efficiency_f} = \frac{\text{total_fluid}}{\text{true_vertical_depth}}$$

WELL_INCLINATION

$$\text{well_inclination_f} = \arccos \left(\frac{\text{true_vertical_depth}}{\text{well_trajectory_length_f}} \right)$$

DATA SCALING

MinMax Scaler

preferred when the features contains less outliers.

Robust Scaler

preferred when the features contains many outliers.

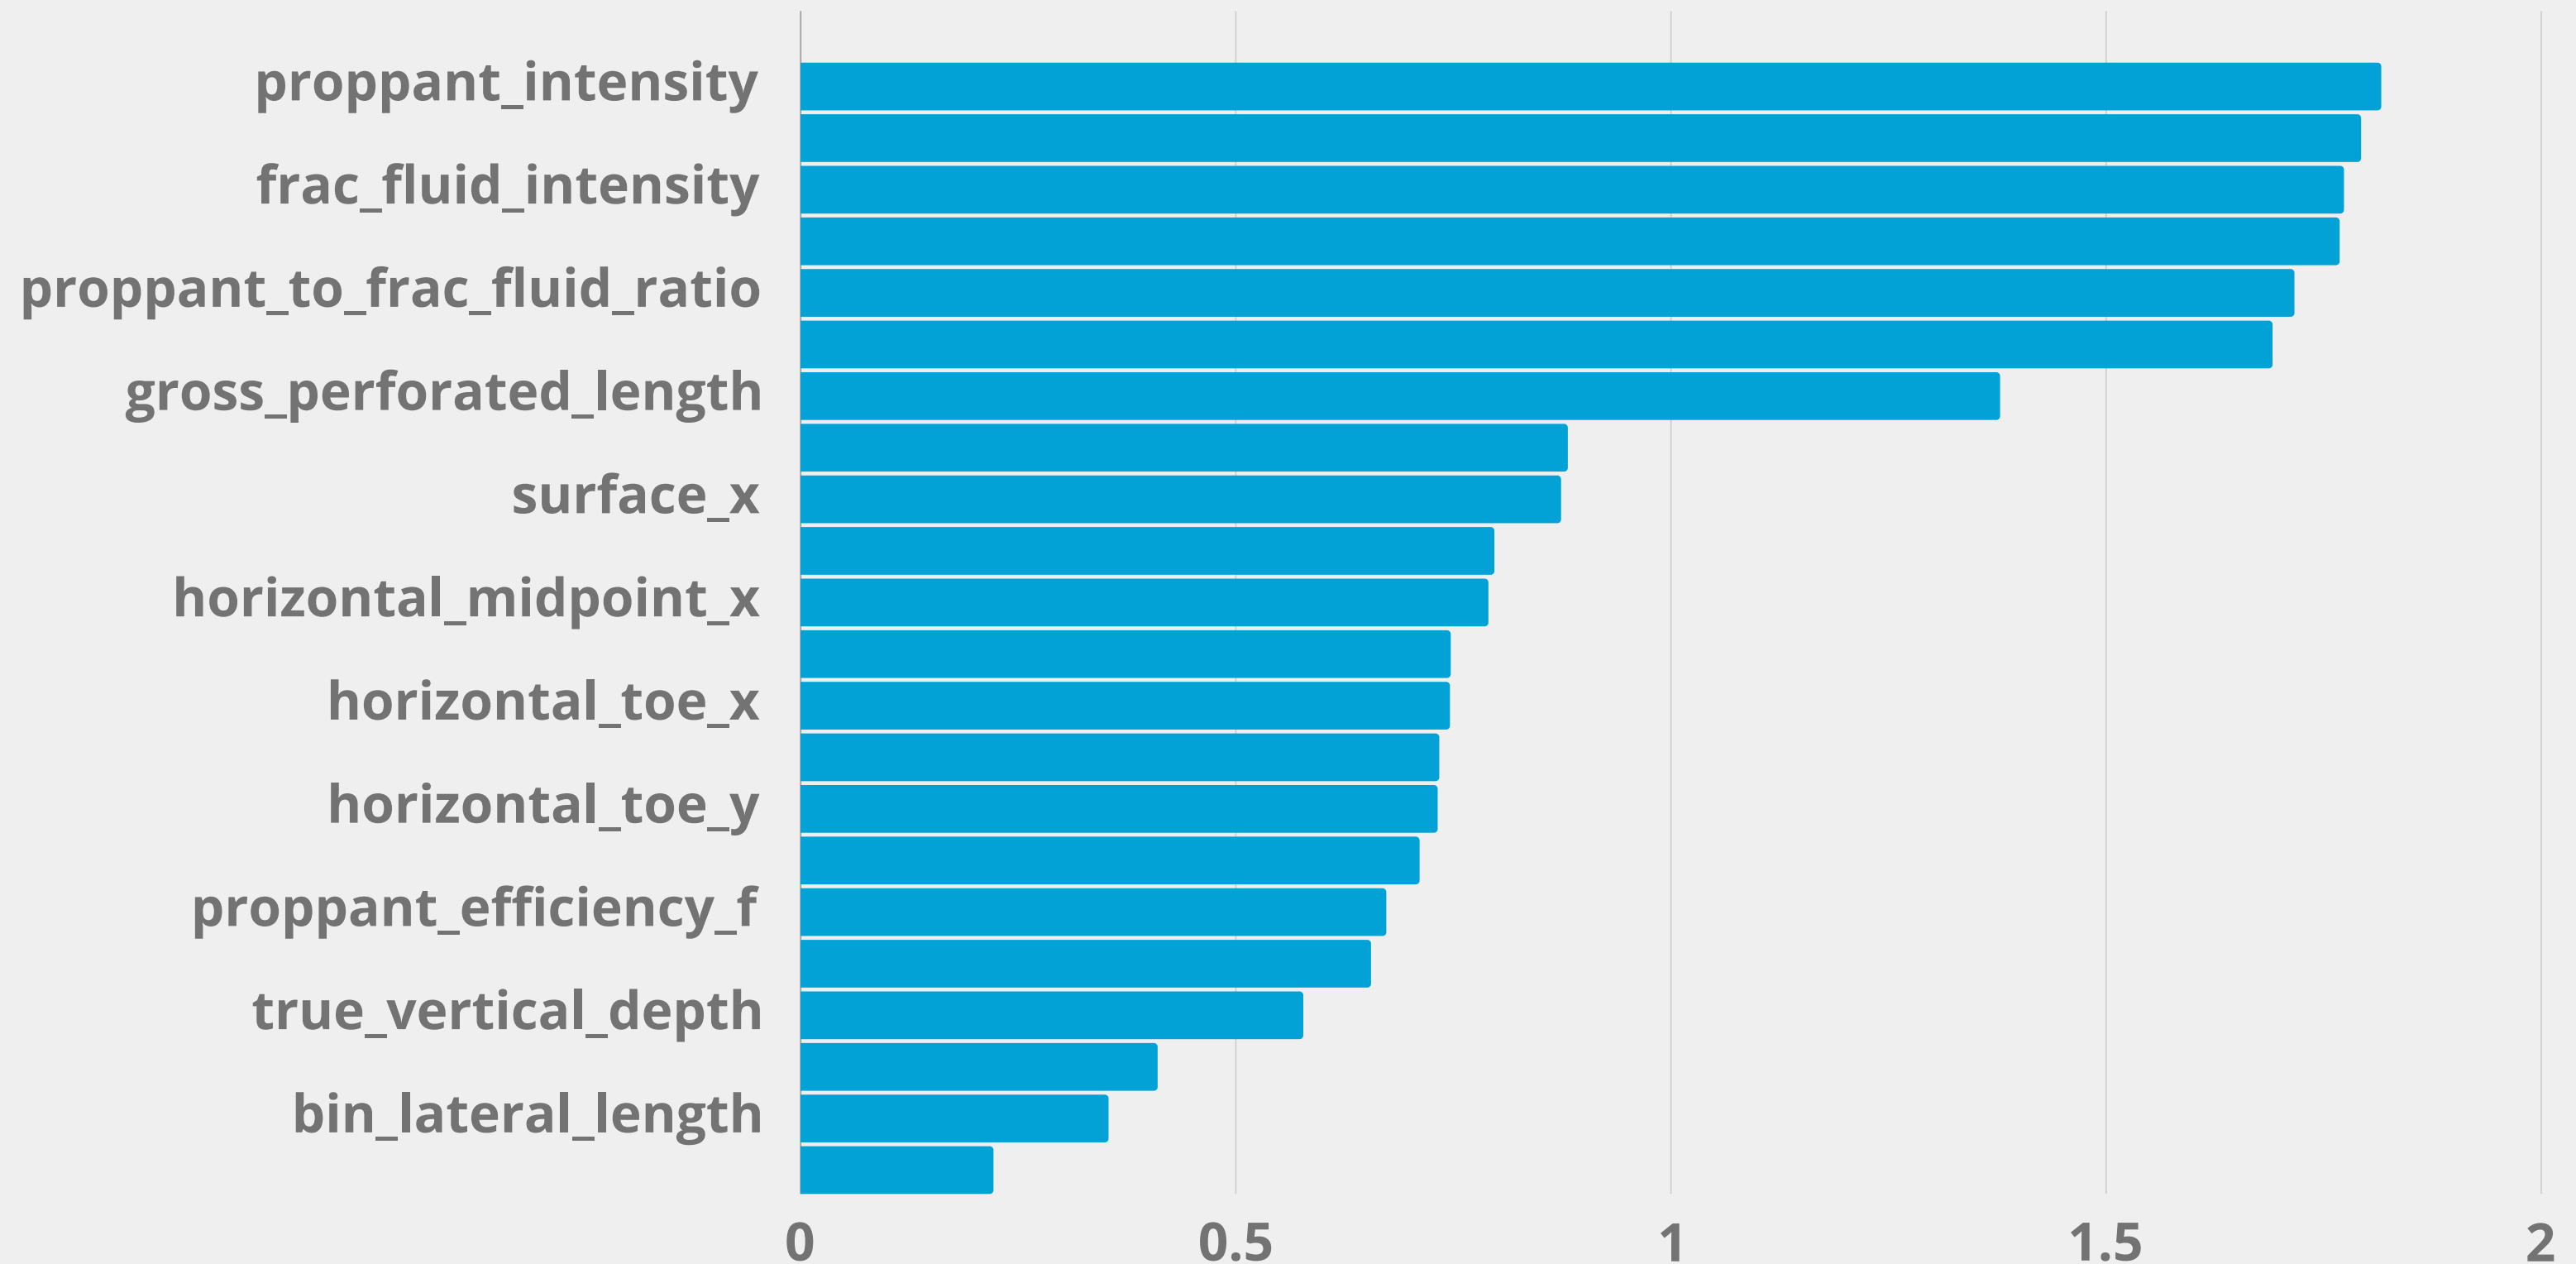

MODEL COMPARISON

MODEL	RMSE
LinearRegression	0.6935
CatBoostRegressor	0.4712
GradientBoostingRegressor	0.5898
LGBMRegressor	0.4953
RandomForestRegressor	0.4311
DecisionTreeRegressor	0.6257
ANN	0.5078

FEATURE IMPORTANCE

We utilized **mutual information scores** with **significant correlation matrix values** to identify important features, which are then employed to tune the model.

MODEL TUNING

Model	RMSE Before Tuning	RMSE After Tuning	RMSE Difference
CatBoostRegressor	0.4712	0.4494	0.0218
LGBMRegressor	0.4953	0.4692	0.0262
RandomForestRegressor	0.4311	0.4284	0.0027

RandomizedSearchCV efficiently tunes machine learning models by randomly sampling parameter combinations, saving time and computational resources while effectively optimizing model performance.

The background features four decorative geometric patterns in the corners. The top-left corner has a series of parallel diagonal lines in a light blue-grey color. The top-right corner contains a cluster of overlapping semi-circles in yellow, red, teal, and dark blue. The bottom-left corner also features a cluster of overlapping semi-circles in red, teal, and dark blue. The bottom-right corner has a series of parallel diagonal lines in a light blue-grey color, mirroring the top-left pattern.

THANK YOU
